CSE0001 · DIGITAL LITERACY

Digital Literacy *Project Report*

Submitted by Namrata Kumari · Reg. No. 25BAI10730 · B.Tech CSE AI ML · 1st Year · Date: 30-03-2026

Course

CSE0001 — Digital Literacy. Exploring essential digital skills for the modern world.

Branch

B.Tech Computer Science Engineering with specialisation in AI & ML.

Scope

Five hands-on tasks covering design, professional presence, coding, communication, and cybersafety.

INTRODUCTION

Building Digital Literacy *Skills for the Future*

Project at a Glance

5

Tasks Completed

Hands-on digital tasks across platforms.

6+

Platforms Used

Canva, GitHub, LinkedIn, HackerRank, Google Forms, and more.

1st

Year Student

B.Tech CSE AI ML, building foundations early.

What This Project Covers

A comprehensive journey through essential digital competencies for students today.

1. **Digital Design:** Creating awareness infographics using Canva.
2. **Professional Presence:** Building profiles on GitHub and LinkedIn.
3. **Safety & Communication:** Email etiquette and cybercrime awareness.

TASK 1

Digital Literacy Awareness *Infographic — Canva*

Created a visual infographic using Canva to explain digital literacy, safe internet practices, and professional online presence for students, using simple visuals, icons, and concise text.

What the Infographic Covered

Sections on digital tools, safe browsing habits, and tips for maintaining a positive online identity — all presented with a clean, organised layout.

Design Approach

Used Canva's templates to customise colours and layouts. Focused on balancing visuals and text to avoid overcrowding while keeping the content easy to understand.

Key Challenge

Selecting the most important information to include without overcrowding the design required careful thinking to balance visuals and content effectively.

Key Takeaway

Learned how to communicate information effectively through design and how visuals can make learning more engaging and accessible for diverse audiences.

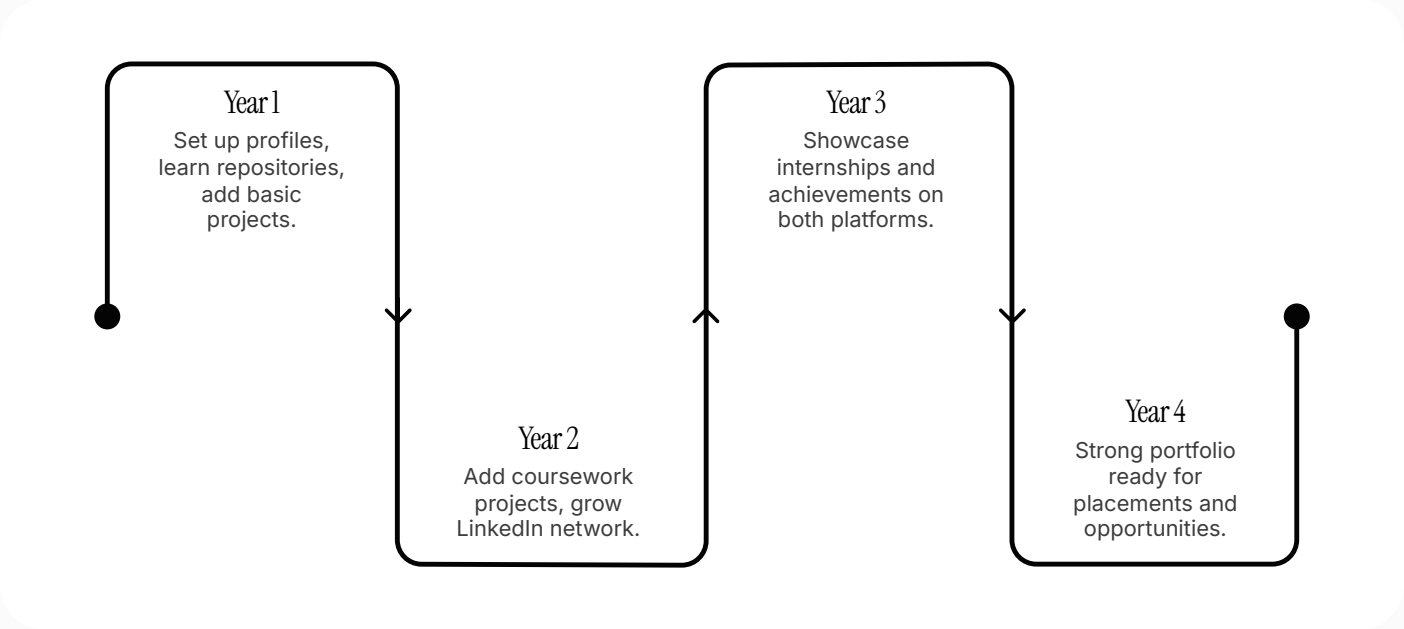
TASK 2

Professional Digital Presence

GitHub & LinkedIn Profiles

Created and updated profiles on GitHub and LinkedIn — two essential platforms for building a professional digital identity as a student in tech.

4-Year Growth Plan



GitHub — Manage repositories and showcase technical projects to the developer community.

LinkedIn — Build professional connections, network, and explore career opportunities.

Goal — Maintain a clean, professional online identity to attract internships and job offers.

TASK 3

Coding & Collaboration Platforms

Explored HackerRank for coding practice and created a Digital Literacy Quiz using Google Forms, learning how data is collected and analysed in real time.

Platforms Explored

1. **HackerRank** — Created account and completed a beginner-level coding problem to understand platform workflows.
2. **Google Forms** — Built a Digital Literacy Quiz with multiple-choice and short-answer question types.
3. **Google Sheets** — Viewed and analysed quiz responses to understand data collection pipelines.
4. **Key Insight** — These platforms are widely used in both academics and industry for coding and surveys.

HackerRank

Coding practice, problem-solving.

Google Forms

Quiz creation, data collection.

Google Sheets

Response analysis, data insights.

Outcome

Improved programming and tool skills.

TASK 4

Professional Email Etiquette

Why It Matters

Clear Subject Line

Every email must have a descriptive, relevant subject so the recipient understands the purpose immediately.

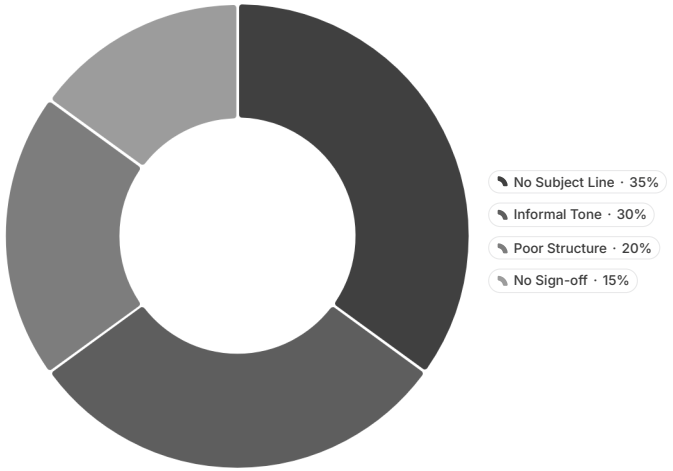
Polite & Formal Tone

Using respectful, professional language ensures the message is taken seriously by professors and recruiters alike. Informal tone can lead to missed opportunities.

Proper Structure

A well-structured email with a greeting, clear body, and appropriate sign-off reflects communication maturity and respect for the reader's time.

Common Mistakes to Avoid



Poor email communication can lead to misunderstandings and missed opportunities with professors and recruiters.

TASK 5

Cybercrime Awareness & Online Safety

Key Threat: Phishing

Cybercriminals use fake messages or links to trick people into sharing sensitive information. Awareness is the first line of defence.

Financial Fraud

Online financial fraud often targets unaware users. Always verify sources before making any online payments or sharing account details.

Root Cause

Most cybercrimes occur due to lack of digital awareness. Education and vigilance are the most powerful tools against online threats.

Personal Commitments

Be careful while clicking links, sharing personal information, and making online payments. Always verify sources before trusting any message.

Conclusion & *References*

This project helped develop essential digital literacy skills — from design and professional presence to coding, communication, and cybersafety — improving both technical knowledge and digital responsibility.

Final Reflection

"This project not only enhanced my technical skills but also made me more aware of my digital responsibilities as a student and future professional."

References

1. **Design & Presence** — Canva, GitHub, LinkedIn used for infographic creation and professional profile building.
2. **Coding & Data** — HackerRank and Google Forms used for coding practice and quiz/data collection tasks.
3. **Cybersafety** — Cyber Crime Portal (cybercrime.gov.in) referenced for online threat awareness and reporting.
